

Your car's ventilation system is a breeding ground for a wide variety of microbes, including mold, bacteria and germs. When you turn your ventilation fan on, these micro-organisms are blown into the passenger compartment and inhaled by you and your family. This is a potentially harmful health problem, especially for people with respiratory sensitivities and children who don't yet have fully-developed immune systems. With an increasing public concern about air quality in your home and workspace, isn't it time to take a closer look at the dangers found in your car?

The solution? The innovative **MiST™ In-Car Air Quality Service**. MiST is a new and very effective way to combat the problem of mold, bacteria and germs as well as offensive odors throughout your vehicle. The result is improved in-car air quality for you and your whole family.

Breathe easy and book your **MiST** service today.
